

## Phreesia saves staff time and boosts productivity at Texas practice

Texas OB/GYN saves six to eight minutes per patient with Phreesia's patient intake management platform

Phreesia expands staff capacity by automating intake, enabling patients to register from home, using their desktop or mobile device, or at the point of care, using custom-built tablets.

### Front-office impact with Phreesia

- Staff members are now better able to manage the patient schedule because Phreesia shows them which patients didn't use Pre-visit, as those patients are the most likely to no-show. Staff have time to reschedule those appointments, if necessary, and replace them with patients on the wait-list, increasing revenue.
- Since everything is clearly listed in the Phreesia dashboard, front desk staff are now able to greet patients without having to worry about handing out forms or determining a patient's balance.
- Front office staff no longer need to spend time capturing clinical information, and can instead focus on improving the patient experience.
